NivuLog H2S / H2S Mini

NivuLog H2S / H2S Mini

Compact, portable measurement instrument for data collection of H₂S concentration in channel networks

Hydrogen sulfide (H₂S) is produced as a result from the degradation of biomass. Far flowing distances, long flowing times as well as saving water at constant pollution loads cause the loads to start decomposition even within the channel.

This in turn leads to heavy corrosion of concrete channel constructions and, in combination with water, destroys the channel constructions in the long run. To avoid damaged channels it makes sense to investigate the hydrogen sulfide concentration, which allows to take the appropriate corrective measures.

Typical Applications

- Wastewater treatment plants
- Industries
- Public Water and sewage systems
